

# ODSC Europe Workshop – Feature Engineering With Signal Types

## Prerequisites and Preparation

1. Install Docker Desktop
2. Install a Python notebook editor, for example, Jupyter or VS Code
3. Install the featurebyte library. See [https://docs.featurebyte.com/latest/get\\_started/installation/](https://docs.featurebyte.com/latest/get_started/installation/) for full instructions.
4. Start Docker
5. Open the workshop notebook and run the entire notebook. The first time the Notebook runs it will download a Docker image and start servers within Docker. This may take 30 minutes or more, depending on the speed of your internet connection.

## Installation Support

Support is available if you encounter problems installing FeatureByte. Please post your questions and requests at <https://github.com/featurebyte/featurebyte/discussions>
